

Data Protection Solutions

Keeping systems monitored, backed up and ready to restore after unexpected events.

We all know your business continually faces risk of system outages, data loss and damage, and even man-made and natural disasters. That's why it's critical to keep your systems monitored, and ready to restore applications and data at a moment's notice after an unexpected event, with minimal disruption to customers and other stakeholders.

Quest data protection solutions take a holistic approach to business continuity by maximizing protection and availability of hybrid IT environments. They protect systems, applications and data wherever they live – on premises and in the cloud.

To start, our system management and monitoring solution ensures systems are working and optimized, to avoid over-utilization that will impact performance and availability. But risks still exist. That's where our comprehensive backup and recovery solutions come in. These solutions simplify data protection and ensure fast recovery, with minimal disruption, after an unplanned system outage or data loss.

We also help you minimize backup storage costs in the data center and in the cloud with a cloud-connected storage, deduplication and replication solution that reduces data volumes by up to 20:1. And our hybrid cloud

management solution helps you take control of your environment, unlock hidden resources and simplify cloud migration. With Quest, you can rest assured your business is protected.

NETVAULT®

Cloud ready data protection for hybrid data centers

NetVault simplifies backup and recovery for large, complex IT environments. Protect all your applications and data on-premises, in remote offices and in the cloud — from one intuitive console — with this scalable data backup and restore solution.

NetVault protects Windows and Linux servers along with Office 365, Exchange, SQL, SharePoint, Oracle, SAP, SAP HANA, DB2, MySQL and many other applications in physical, virtual and cloud environments. It supports a wide range of storage including SAN, NAS, VTL and tape.

NetVault provides agent and agentless VM protection and can scale to protect thousands of virtual machines (VMs). NetVault delivers strong encryption and is FIPS certified for data security.

QORESTOR™

Cloud-connected storage, deduplication and replication

Connect to the cloud faster and more easily with QoreStor™ software-defined storage, deduplication and replication. With QoreStor, no matter what backup software you use, you'll accelerate backup performance through protocol accelerators, reduce storage requirements and costs through content-aware, variable block deduplication, and replicate faster and safer to the cloud for disaster recovery.

QoreStor cloud tiering lets you leverage low-cost object storage for long-term data retention. You can lower data protection costs and maximize the return on your IT investment by leveraging virtually any storage hardware, backup software, virtualization platform or cloud provider. With QoreStor, you get cloud-based disaster recovery at your fingertips.

Altogether, you can count on QoreStor to reduce storage requirements by 20:1, increase data ingest speed to 20TB/Hr and make replication windows 10-15x smaller.

RAPID RECOVERY

Fast backup and instant recovery for demanding RTOs and RPOs

Rapid Recovery is snapshot-based backup that's perfect for small and medium sized IT environments. With Rapid Recovery, you can back up and quickly recover Windows and Linux servers along with Exchange, SQL, SharePoint and Oracle applications and data in physical, virtual and cloud environments.

Rapid Recovery allows you to run without restore, with zero impact on your users, as if the outage or data loss never happened. It provides virtual standby for instant recovery and to quickly and easily migrate servers to the cloud.

Rapid Recovery also includes data deduplication and replication at no additional cost. It also provides encryption and is FIPS-certified for data security.

FOGLIGHT® EVOLVE

Take control of your environment, unlock hidden resources and simplify cloud migration

Foglight Evolve takes a holistic and proactive approach to hybrid cloud management so you can simplify the complexity of your data center, reduce infrastructure costs, maximize system performance, and predict future costs with more accuracy.

With Foglight Evolve, you can tackle IT environment complexity, regardless of the complexity of an ever-increasing mix of clouds, hypervisors, and applications. It also helps you keep resource requirements in check, including data storage or infrastructure costs.

Furthermore, the optimizing abilities built into Foglight Evolve keep users and business stakeholders happy by helping you meet maximum system uptime and performance.

ABOUT QUEST

At Quest, our purpose is to solve complex problems with simple solutions. We accomplish this with a philosophy focused on great products, great service and an overall goal of being simple to do business with. Our vision is to deliver technology that eliminates the need to choose between efficiency and effectiveness, which means you and your organization can spend less time on IT administration and more time on business innovation.

BENEFITS

- Protect all your applications and data on-premises, in remote offices and in the cloud — from one intuitive console
- Connect to the cloud faster and more easily with software-defined storage, deduplication and replication
- Back up and quickly recover applications and data in physical, virtual and cloud environments
- Tackle IT environment complexity of an ever-increasing mix of clouds, hypervisors, and applications

Quest data protection solutions help you protect your systems, applications and data wherever they live — on premises and in the cloud.
